membrane metalloprotease designated metallysine II (NEBII) gene (AA228810). NEPII is involved in (in)activation of neuronal and hormonal peptide messengers. NEPII is used to screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or neurodegenerative diseases; growth disorders of endocrine origin; disturbances of the hypothalamic- hypophyseal axis or endocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immune disorder; arthritis, endotoxin shock; sepsis; diabetes mellitus; severe mental retardation; dyskinesia; Huntington's disease; Gilles de la Tourette's syndrome; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                      The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering S (which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or beamaropoletic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), brain or neuronal associated diseases disorders, cardiovascular disease, brain or neuronal associated diseases sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders and dysfunction, metabolic disorders and infamatory disorders and disorders and infamatory disorders and disorders and infamatory disorders.
                                                                                                                                                      Novel protease polypeptide useful for screening for substances that may be used to treat, e.g., cancers, immune-related diseases, cardiovascular disease, migraine, pain, psychotic and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders. (1) may also be useful as a diagnostic tool for a disease or disorder such as those above. AAS97159-AAS97195 represent human protease coding sequences and primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                angina pectoris; myocardial infarction; stroke; ulcer; allergy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gastrointestinal disorder; autoimmune; inflammatory; cell proliferative; cardiovascular; developmental; epithelial; neurological; reproductive; AIDS; Acquired Immune Deficiency Syndrome; allergy; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction in particular and exertile dysfunction (MED) or female sexual dysfunction in particular (e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such say premature e)aculation, anorgasmia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is SEP consensus DNA sequence found in human, mouse and rat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anaemia; asthma; atherosclerosis; hypertension; myocardial infarction; pepatitis; cancer; psoriasis; Cushing's syndrome; hypothyroidism; eczema; epilepsy; Alzheimer's disease; Huntington's disease; Parkinson's disease; Pick's disease; infertility; vitiligo; drug screening; gene therapy; ss.

The invention relates to an isolated human protease polypeptide (PRTS). PRTS protein and DNA are useful for diagnosing, treating and preventing quastrointestinal disorders (gastriits, cirrhosis, Crohn's disease), autoimmune/inflammatory disorders (AIDS, integry, rheumatoid arthrits, anaemia, asthma), cardiovascular disorder (altergy, rheumatoid arthritis, anaemia, asthma), cardiovascular disorder (altergosclerosis, hypertension, myocardial infarction), cell proliferative disorders (hepatitis, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  psoriasis), developmental disorders (Cushing's syndrome, hypothyroidism) epithalial disorder (vitiligo, keloid, eczema), neurological disorders (epilepsy, Alzheimer's disease, Ptck's disease, Huntington's disease, Parkinson's disease, Parkinson's disease, Protein is useful in a number of drug sorreening techniques and to protein is useful in a number of drug sorreening techniques and to analyse the proteome of a tissue or cell type. PRTS DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, in sometic or germline gene therapy and in microarrays utilising fluids or tissues from patients to detect altered PKIN expression. The present sequence is human PRTS-13 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human protease polypeptide, useful in diagnosis, prevention and treatment of gastrointestinal, cardiovascular, autoimmune/inflammatory cell proliferative, developmental, epithelial and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Yue H, Au-Young J, Griffin JA, Policky JL, Ramkumar J, Yang J; Thangavelu K, Ding L, Rearney L, Baughn MR, Borowsky ML; Sanjanwala MS, Yao MG, Burford N, Walla NK, Lal P, Lee S, Todd Lo TP, Tang YT, Ellict VS, Azimzal Y, Lu Y;

membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc and specificates play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the human SNEPa, SNEPb and SNEPc proteins, the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like
treatment or prevention of male sexual dysfunction, especially male erectile dysfunction (MED). The NPY inhibitor may be used with an auxiliary active agent such as an SEP inhibitor. The invention provides a SEP sexust can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treat abnormal drink and food intake disorders,

diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPa. SNEPb or SNEPc. Such antibodies are used to isolate or identify clones expressing the protein, or to purify the proteins by affinity chromatography. SNEP proteins may also be used in screening for compounds which modulate SNEP endopeptidase activity, and to assess enzymatic cleavage of small amplecule substrates in cells, cell-free preparations, chemical libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         analgesic;

diagnostics for animal and human diseases, and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPa, SNEPb or SNEPc. Such antibodies are used to isolate or identify clones expressing the protein, or to purify the proteins by affinity chromatography.

SNEP proteins may also be used in screening for compounds which modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                      molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), SNEP nucleotides, and SNEP activators or inhibitors may used to treat acute and chronic renal insufficiency, renal and hepatic
                      The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the CDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP nucleotides may be used as hybridisation probes for CDNA and genomic DNA; to isolate full-length cDNAs and genomic clones encoding SNEPa, SNEPb or SNEPc; to isolate cDNAs and genomic clones encoding SNEPa,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tschaemia, pain, stroke, hypertensive disease, cancer, inflammation, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           another organ, or to diagnose or treat any disorder related to abnormal expression of SNEPa, SNEPb or SNEPc. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "neutral endopeptidase metallopeptidase-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cDNA encoding neutral endopeptidase metallopeptidase-like enzyme NL-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NEP-like enzyme; protein production; protein secretion;
neurological disease; Alzheimer's disease; pain; psychiatric disorder;

metallopeptidase-like enzyme, designated NL-2. The specification also describes NL-1 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used to promote production and secretion of foreign proteins and active biopeptides, using chimeric constructs containing the foreign protein downstream from and in phase with the N-terminal region. The NL enzymes are have been localised to the brain, and may be useful in the treatment of neurological diseases such as Alzheimer's disease, pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              splice variant; alternative splicing; zinc endopeptidase family; neuropeptide; peptide hormone; processing; metabolism; vaccine; drug screening; renal insufficiency; hepatic disease; ischaemia; pain; hypertension; cancer; inflammation; cardiovascular disease;
                                                                                                                                                                                                                                                                                                                                                                       and psychlatric disorders. M. enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide processing by the NL-3 enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 2676;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             neuronal disease; pancreatic disease; prostatic disease; respiratory disease; gene therapy; nephrotropic yasotropic; exerbioprotective, hypotensive; cytostatic; antiinflammatory;

The invention relates to the human SNEPA, SNEPB and SNEPC proteins, and the cDNAs encoding them. SNEPA, SNEPB and SNEPC are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptidase and peptide hormones. SNEP nucleotides may be used as hybridisation probes for cDNA and genomic SNEPP or SNEPP or SNEPP or SNEPP or SNEPP.

SNEPP or SNEPP; to isolate collastion probes for cDNA and genomic SNEPP or SNEPP; to isolate collassion and isometical for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPP, SNEPP or SNEPC. Such antibodies immunospecific for SNEPP, SNEPP or to purify the proteins by a affinity chromatography.

SNEP protein, or to purify the proteins by a fifinity chromatography.

SNEP proteins may also be used in screening for compounds which modulate snep endopeptidase activity, and to assess enzymatic cleavage of small and product mixtures. The SNEP proteins compounds compositions), considered so the snep activators or inhibitors may used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       peptide activation and/or degradation in the brain or kidney or in another organ, or to diagnose or treat any disorder related to abnormal
                                     New membrane-associated metallopeptidase SNEPa, SNEPb and SNEPc polypeptides and polynucleotides, useful for treating e.g. acute and chronic renal insufficiency, pain, stroke, cancer, inflammation, renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, well as cardiovascular, neuronal, pancreatic, prostatic, renal, respiratory or hepatic diseases. they may also be used in modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SNEPc. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rat; membrane metalloprotease; neprilysine II; NEPII; inactivation; deuron; hormone; peptide messenger; inhibitor; detection; disorder; cardiovascular disease; neurodegenerative disease; growth disorder; hypothalamic-hypophyseal axis; endocrine disorder; ds.

```

```
This sequence represents the gene for the rat membrane metalloprotease designated neprilysine II (NEPII), which is involved in (In)activation of neuronal and hormonal peptide messengers. NEPII is used to screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved. e.g. cardiovascular or neurodegenerative diseases; growth disorders of endocrine origin; disturbances of the hypothalamic-hypophyseal axis or endocrine disorders.

An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as female sexual arousal disorder -
                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male erectile dysfunction (MED) or female sexual dysfunction (FSD) (e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, an organia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is human SEP

                                                                                                                                                                                                                                                                                                                                                                                                                                associated with male genitalia, in the preparation of a medicament for the treatment or prevention of male sexual dysfunction, especially male erectile dysfunction (MED). The NPY inhibitor may be used with an auxiliary active agent such as an SEP inhibitor. The invention provides a SEP assay that can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treat abnormal drink and
                                                                                                                                                                                                                                                                                                                           The present sequence is a nucleotide sequence coding for human SEP, a soluble secreted endopeptidase. The invention relates to the use of an inhibitor of NPY, or an inhibitor of NPY XI receptor especially an inhibitor selective for an NPY or NPY XI receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 545,

                                                                                                    Sequences AA228811-228827 represent probes for detecting the rat membrane metalloprotease designated neprilysine II.(NEPII) gene (AA228810). NEPII is involved in (in)activation of neuronal and hormonal peptide messengers. NEPII is used to screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or neurodegenerative diseases; growth disorders of endocrine origin, disturbances of the hypothalamic- hypophyseal axis or endocrine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as

```
The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male erectile dysfunction (MED) or female sexual dysfunction (FSD) (e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, anorgasmia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is SEP consensus DNA sequence found in human, mouse and rat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 designated neprilysine II (NEPII), which is involved in (in)activation of neuronal and hormonal peptide messengers. NEPII is used to 'screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or neurodegenerative diseases; growth disorders of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the gene for the rat membrane metalloprotease
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   endocrine origin; disturbances of the hypothalamic-hypophyseal axis endocrine disorders.

```
The invention relates to a human T-box transcription factor protein, MTbx. The polypeptide can be administered therapeutically, especially by expressing encoding polynucleotides, to treat disorders characterized by aberrant polypeptide expression or activity, e.g. immune system diseases (e.g. HIV, leukemia, etc.), chronic inflammatory diseases (e.g. asthma, theumatoid arthritis etc.), developmental disorders, cardiovascular disorders, or other disorders arising from improper transcriptional regulation. They are especially useful to treat conditions characterized by loss of tissue integrity relating to disease and/or injury e.g. HIV, diagnose related to polypeptide expression or activity. The

recombinant methodology. The nerve differentiation factor is useful for the treatment of nerve disorders such as senile dementia, and for the promotion of nerve regeneration after nerve injury. The present sequence represents a human Tbr-2 gene encoding the nerve differentiation factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a gene Tbr-2 encoding a nerve differentiation factor that is highly expressed in fetal brain tissue. The nerve differentiation factor polypeptides can be expressed by standard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
